

RAILWAY SERVICES

RAILWAY SERVICES

Wherever you work in the rail industry, if you wish to tread a little more lightly on our planet, give LCM a call

UK-Wide Railway Services From LCM

Wherever in the world today passenger and freight rail systems are expanding at an unprecedented rate. The need to reduce road traffic, move freight and people long distances quickly, efficiently or to reduce pollution is driving huge investment in rail in every continent of the world.

Whatever the motive for that investment all governments require it to be delivered as sustainably as possible and to the highest environmental standards.

Established 30 years LCM Environmental Ltd (LCM) offers strategic and operational fuel and environmental management solutions that reduce life cycle costs, carbon footprint and improve environmental sustainability.

This is delivered through a series of programmes led by LCM staff working in partnership with client staff to deliver improvements that achieve client company improvements and objectives.

STRATEGIC AND OPERATIONAL FUEL MANAGEMENT

Fuel is a non-renewable resource that pollutes. Its use must be responsible and alternatives to its use explored. However its use must be carefully managed, from purchase through to delivery, to ensure it is used efficiently, cleanly and as efficiently as possible. Responsible companies adopt high performance, low emission engines that use fuel that is of the highest possible quality to reduce our carbon footprint. LCM can help you adopt processes that ensure this.

ENVIRONMENTAL MANAGEMENT SOLUTIONS

Wherever we tread we should do so responsibly. LCM can assist companies in assessing their carbon footprint, assess the environmental risk in what they do and devise strategies to reduce their impact. The penalties for environmental shortcoming are increasingly high and LCM can assist companies in minimising this risk and protecting corporate reputations.
